

## ABSTRACT

5 For operating two operating systems of a computer without  
performance loss, the invention proposes a method in which  
a secondary operating system driver (SOS driver) of the  
primary operating system is loaded for loading and control-  
10 ling the secondary operating system and which subsequently  
loads the secondary operating system. The invention also  
provides a device with a corresponding secondary operating  
system driver (SOS driver) of the primary operating system  
for driving a board support package.
